

The Division of Human Genetics at the University Hospital Inselspital in Berne, Switzerland has an opening for a

Cytogenetic Technologist

Job description:

you will be required to independently perform all aspects of classical cytogenetics i.e. tissue culture, processing, staining and karyotyping of all types of specimen in the Cytogenetics laboratory, maintenance of equipment and solutions. The laboratory is accredited and requires strict compliance with quality control protocols. You will be trained in molecular cytogenetic techniques i.e. QF-PCR, CGH and FISH as required.

Requirements:

you are a qualified Medical Technologist, or Biology Technician with experience in tissue culture, chromosome preparation and karyotyping.

You are a communicative, responsible, flexible individual with initiative and the ability to integrate within a heterogenic team.

You are a citizen of a European Union country and therefore eligible to work in Switzerland.

You have a good working knowledge of either English or German.

Experience in molecular genetic techniques is desirable, but not required.

We are offering:

an interesting and responsible position within an innovative team at one of Switzerland's major University Hospitals.

Flexible working hours with no shift or weekend work.

Ample opportunity for continuing education and professional development.

Participation in research projects.

A competitive salary and benefits package.
